

MATH9102 Fundamentals of Data Analysis

Guidance on the Use of AI Tools for Continuous Assessment

You may use AI tools (e.g., ChatGPT, Claude, Grammarly, or similar) to support aspects of your work, such as:

- Rephrasing explanations for clarity and readability.
- Checking grammar, spelling, and formatting.
- Provide general background on statistical concepts.
- Generating ideas for how to present or visualise data.

However:

- **All choices, interpretations, and conclusions must be your own.**
- You must **not** use AI to write the interpretation of results or draw conclusions for you.
- The conventions and guidance provided in lectures and examples on how to conduct data analysis must be followed.

Your responsibility is to demonstrate your own reasoning, decision-making, and understanding. Using AI in a way that substitutes for your own analysis will be treated as **academic misconduct**. Always ensure your submitted work reflects your own analysis, choices, and justifications.
